

Corner / Edge Protection

Corner Keepers

Corner keepers are protective foam components designed to shield exposed corners from impact, abrasion, and damage. Ideal for safeguarding furniture, countertops, glass, panels, and other vulnerable surfaces.

“U” Style

U-shaped channel designed to fit securely over edges, rails, or panels. The open channel allows for easy installation while maintaining a snug grip, making it ideal for edge protection, safety padding, and sealing applications.

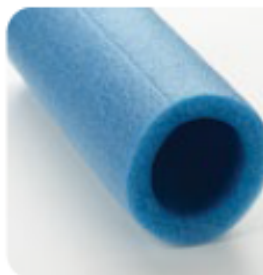

“U” Style Fuse Corner

Protective edge trim formed into a seamless 90-degree angle. Designed with a U-shaped channel, it fits securely over corners and edges while the fused construction eliminates gaps at the bend for continuous cushioning and a clean finish.

“L” Style

90-degree design that provides protective coverage along corners and edges. Its angled shape allows for easy placement along exposed edges, making it ideal for packaging, edge guarding, construction protection, and safety applications.

Tube Style

Lightweight, cylindrical cushion with a hollow core running through the center. Made from durable, closed-cell foam, it offers flexibility, shock absorption, and water resistance.
