FORENSIC TECHNOLOGY SERVICES

Our Forensic Technology Team collects, preserves, processes, and analyzes digital evidence in a repeatable and defensible manner. Our team is highly trained and deeply experienced, offering a combination of investigative, legal process, technical, electronic discovery, and business expertise that provides clients with a unique advantage inside the company or in the courtroom.

Data Collection & Preservation

B. Riley Advisory Services follows industry accepted protocols and procedures, while maintaining a documented chain of custody on each piece of evidence so there is a legal audit trail. Our professionals have extensive experience collecting data in a forensically sound and legally defensible manner from all types of data sources:

- Personal computers and laptops
- Email servers
- Network storage
- Mobile devices and tablets
- Cloud based data capture
- Social media collections
- Targeted network collections

Digital Investigations

Our professionals are experts in the field of computer forensics and digital investigations. They hold numerous certifications and have training from various government agencies and private computer forensic associations. B. Riley Advisory Services employs many techniques to better understand and analyze the data extracted from each computer system, including but not limited to:

- Computer forensic analysis
- Mobile device forensics
- Data recovery
- Extract and interpret log data
- Keyword searching
- System artifact recovery and analysis
- Social media site analysis
Electronic Discovery Services

Our eDiscovery professionals assist our clients with identifying and scoping all relevant data sources and creating a defensible plan to preserve, cull and process all responsive electronic stored information (ESI). Our team will manage the project from the collection phase throughout the review and final ESI production.

- ESI scoping and preservation
- ESI processing, searching [culling] and hosting
- Technology assisted review (TAR)
- Project management
- Enterprise data scoping and mapping (EDS)
- Litigation readiness consulting

Expert Witness Services

As required, our forensic technology experts can interpret the digital evidence in a final report by providing an opinion. Our experts have provided expert testimony in federal and state courts, before arbitration panels, and at depositions in jurisdictions throughout the United States.

- Expert reporting
- Expert testimony
